8. Phase 4: Implementation
9. Quick Reference - All Prompts
10. Example Conversation Flow
11. Troubleshooting & Tips

1. What is the SaaS Product Factory?

The SaaS Product Factory is a complete, professional-grade system for building full-stack SaaS applications from initial idea to production deployment. Unlike ad-hoc prompting, this system guides AI coding agents through a rigorous, specification-driven process that produces pixel-perfect, tested, production-ready code.

Key Features:

- Structured discovery process (20 questions across 9 domains)
- Automatic generation of 40-80 page Product Requirements Document
- Professional Design System with exact color codes and component specs
- PR-by-PR task roadmap with dependencies and test requirements
- Implementation guidance following a proven 7-step cycle

Timeline: 4-16 weeks from idea to deployed application (depending on complexity)

2. Package Contents

When you extract `saas-product-factory.zip`, you'll find the following structure:

```
saas-product-factory/
  ■■■ README.md                (Overview and features)
  ■■■ QUICK_START.md           (5-step quick start guide)
  ■■■ agents/
    ■ ■■■ discovery_agent.md    (Phase 0: Ask 20 questions)
    ■ ■■■ prd_generator_agent.md (Phase 1: Generate PRD)
    ■ ■■■ design_system_generator_agent.md (Phase 2: Design System)
    ■ ■■■ task_roadmap_generator_agent.md (Phase 3: Task breakdown)
    ■ ■■■ implementation_orchestrator_agent.md (Phase 4: Build system)
  ■■■ examples/
    ■ ■■■ simple_saas_example.md (Complete example: TaskFlow app)
  ■■■ references/
    ■■■ testing_philosophy.md    (When and how to test)
    ■■■ common_pitfalls.md      (15 anti-patterns to avoid)
    ■■■ templates/              (Code templates directory)
```

3. Getting Started - Step by Step

Step 1: Upload the Zip File

Start a new conversation with Claude (or GPT-4, Cursor, etc.) and upload `saas-product-factory.zip`

Initial Prompt:

```
I've uploaded saas-product-factory.zip

This is a complete system for building SaaS applications from idea to
production.

Please:
1. Extract and examine the contents
2. Confirm you can see all agent files in agents/
3. Then we'll begin building a new SaaS product

Start by listing the files you can see.
```

The AI will extract the zip and confirm it can see all 5 agent files plus examples and references.

4. Phase 0: Discovery (Answer 20 Questions)

Discovery is the foundation. You'll answer 20 structured questions across 9 domains to define your product completely.

The 9 Domains:

1. Business Fundamentals (product concept, users, revenue model, market)
2. Core Features & Workflows (must-have features, user journey, data collection)
3. AI/Automation Strategy (where to use AI, quality vs. cost tolerance)
4. Admin & Operations (team roles, no-code configuration needs)
5. Integrations & Tech Stack (external services, hosting preferences)
6. Design & Branding (brand guidelines, personality matrix, platform priority)
7. Launch & Growth (success metrics, timeline)
8. Constraints & Risks (budget, technical constraints, top concerns)
9. Reference Materials (competitors, inspiration, examples)

Prompt to Start Discovery:

```
Read: agents/discovery_agent.md

Interview me using the 20 questions across 9 domains.
Ask one question at a time, wait for my answer, then move to next.

Start with Domain 1: Business Fundamentals
Begin with Q1.1: "What is your product concept in one sentence?"

After all 9 domains complete, save my answers in structured format.

Let's begin.
```

Time Required: 1-2 hours (can be done across multiple sessions)

5. Phase 1: Generate PRD

After discovery, the AI generates a comprehensive Product Requirements Document with 18 sections.

Prompt:

```
Discovery complete!

Now read: agents/prd_generator_agent.md

Based on my discovery answers, generate a Product Requirements Document
following the 18-section structure.

PROCESS:
1. First, show me the PRD outline (section titles only)
2. Wait for my approval
3. Then show me 3 sample sections:
  - Section 6 (one feature specification)
  - Section 9 (data model excerpt)
  - Section 16 (open questions)
4. Wait for approval of writing style
5. Then generate complete PRD (all 18 sections)
6. Save to: docs/prd.md

Begin by showing me the outline.
```

Output: 40-80 page Product Requirements Document

Time: 30 minutes - 2 hours

6. Phase 2: Generate Design System

The Design System defines exact visual specifications - colors, typography, components, layouts.

Prompt:

```
Read: agents/design_system_generator_agent.md
```

```
Based on:
```

- docs/prd.md (product requirements)
- Discovery Q6.1 (brand preferences)

```
Generate Design System with 17 sections.
```

```
PROCESS:
```

1. Show me:
 - Color palette (with hex codes)
 - Typography scale
 - 3 key component specs (Button, Card, Modal)
2. Wait for approval
3. Generate complete Design System
4. Save to: docs/DESIGN_SYSTEM.md

```
Begin with colors and typography.
```

Output: 30-50 page Design System with 40+ component specifications

7. Phase 3: Generate Task Roadmap

Task Roadmap breaks the work into 30-50 PRs with dependencies, file paths, and test requirements.

Prompt:

```
Read: agents/task_roadmap_generator_agent.md

Based on:
- docs/prd.md
- docs/DESIGN_SYSTEM.md

Generate task roadmap breaking work into 30-50 PRs.

PROCESS:
1. Show me:
  - Phase breakdown
  - 3 sample PRs (simple, medium, complex)
  - Testing strategy
  - Total effort estimate
2. Wait for approval
3. Generate complete roadmap
4. Save to: docs/TASKS.md

Begin with phase breakdown.
```

Output: 30-50 PRs across 8-10 phases with full specifications

8. Phase 4: Implementation

Build the system PR by PR using the Implementation Orchestrator's 7-step cycle.

Prompt for PR-001:

```
Read: agents/implementation_orchestrator_agent.md
```

```
We now have:
```

- docs/prd.md
- docs/DESIGN_SYSTEM.md
- docs/TASKS.md

```
Build PR-001 following the 7-step PR cycle.
```

```
PROCESS:
```

1. Read PR-001 spec from TASKS.md
2. Gather context from PRD and Design System
3. Show me implementation plan
4. Wait for approval
5. Implement the code
6. Run tests (if required)
7. Create pull request

```
RULES:
```

- Follow specs exactly (no improvising)
- Use Design System tokens only
- Tests must pass before merge
- Ask if spec is ambiguous

```
Show me your plan for PR-001.
```

Repeat for All PRs:

After PR-001 merges, prompt:

```
PR-001 complete!
```

```
Build PR-002 following same process:
```

1. Read PR-002 from TASKS.md
2. Check dependencies
3. Show plan
4. Implement
5. Test
6. Create PR

9. Quick Reference - All Prompts

Phase	Prompt
Upload Zip	Extract saas-product-factory.zip List files you can see
Discovery	Read agents/discovery_agent.md Interview me with 20 questions Start with Q1.1
Generate PRD	Read agents/prd_generator_agent.md Generate PRD from discovery Show outline first
Design System	Read agents/design_system_generator_agent.md Generate Design System Show colors first
Task Roadmap	Read agents/task_roadmap_generator_agent.md Generate tasks from PRD+Design Show phases first
Implementation	Read agents/implementation_orchestrator_agent.md Build PR-001 Show plan first

10. Example Conversation Flow

Here's what a real conversation looks like:

You:

I uploaded saas-product-factory.zip. Extract and confirm files.

AI:

✓ Extracted. I see 5 agents, 1 example, 2 references. Ready to start.

You:

Read agents/discovery_agent.md. Start with Q1.1.

AI:

Q1.1: What is your product concept in one sentence?

You:

TaskMaster helps freelancers track time and generate invoices automatically.

AI:

Q1.2: Who are your 2-5 primary user personas?

...continues for all 20 questions...

You:

Generate PRD. Show outline first.

AI:

PRD Outline: 1. Executive Summary, 2. Vision... Approve?

11. Troubleshooting & Tips

Common Issues:

Issue: AI doesn't see the zip

Solution: Make sure you uploaded it. Try saying 'list all uploaded files'

Issue: Discovery takes too long

Solution: You can split across sessions. Say 'pause here, continue later'

Issue: PRD is too generic

Solution: Your discovery answers were vague. Be specific in answers.

Issue: Design System missing components

Solution: Tell AI which components from PRD § 6 are missing

Issue: Tests are confusing

Solution: Read references/testing_philosophy.md for clarity

Issue: AI goes off-spec in implementation

Solution: Remind: 'Follow TASKS.md exactly, no improvising'

Best Practices:

- Take your time in Discovery - quality answers = quality specs
- Approve outlines before full generation - easier to change structure early
- Review each PR plan before implementation - catch issues before code is written
- If tests fail, fix code not tests - tests define correct behavior
- Mark PRs complete in TASKS.md after merge - track progress
- Document decisions in TASKS.md § Decision Log - future you will thank you

Support:

All documentation is in the package. Read README.md for overview, QUICK_START.md for 5-step guide, and agent files for detailed instructions. Reference files explain testing and common pitfalls.

SaaS Product Factory

From Idea to Production in 4-16 Weeks

Professional. Systematic. AI-Assisted.

Start building today.
